[SIGGRAPH ASIA 2014]

Tabletop System for Changing Satiety

**Users put food on a transparent plastic plate.
Back of each plate, an infrared LED pattern is attached, to
detect the position of plates.**

Cross-modal interaction

- One sensory modality changes affected by other sensory stimuli that are simultaneously received through other senses
- The connections between modalities are built based on our daily experiences

Meta Cookie [CHI 2011]

Changes the perceived taste of food
using visual and olfactory Augmented Reality

Meta Cookie (2018)
